

1. Open the vLite and select the WAU folder on your hard drive.

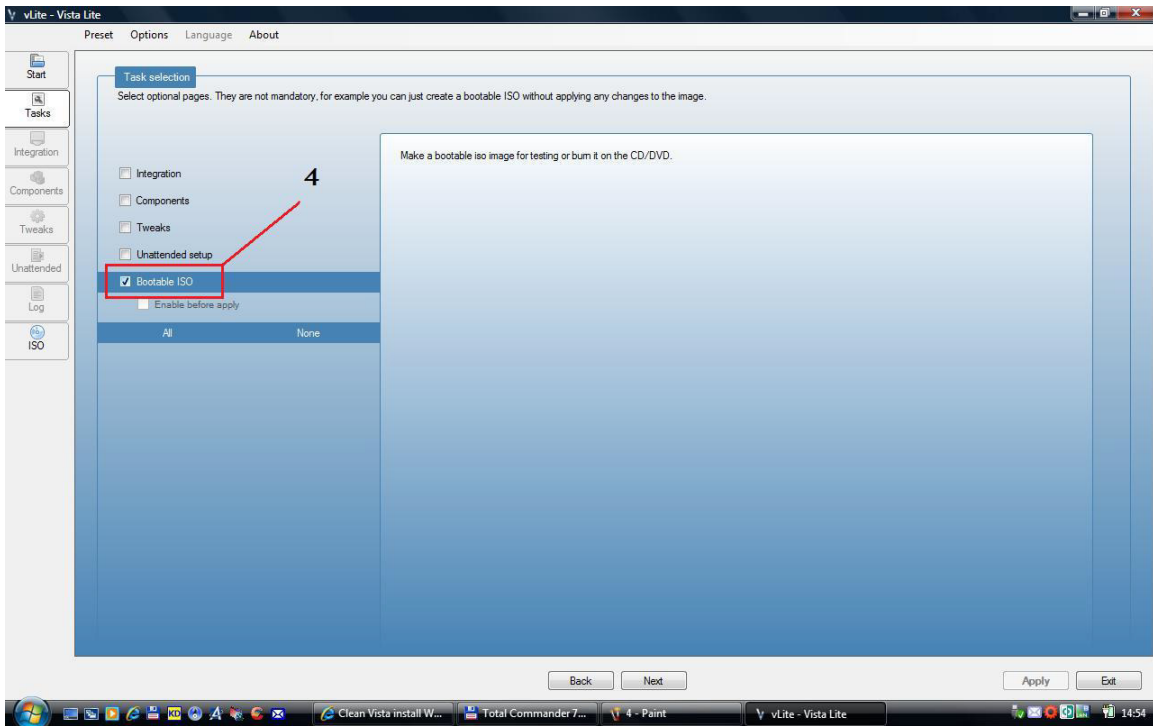

2. Select your operating system.

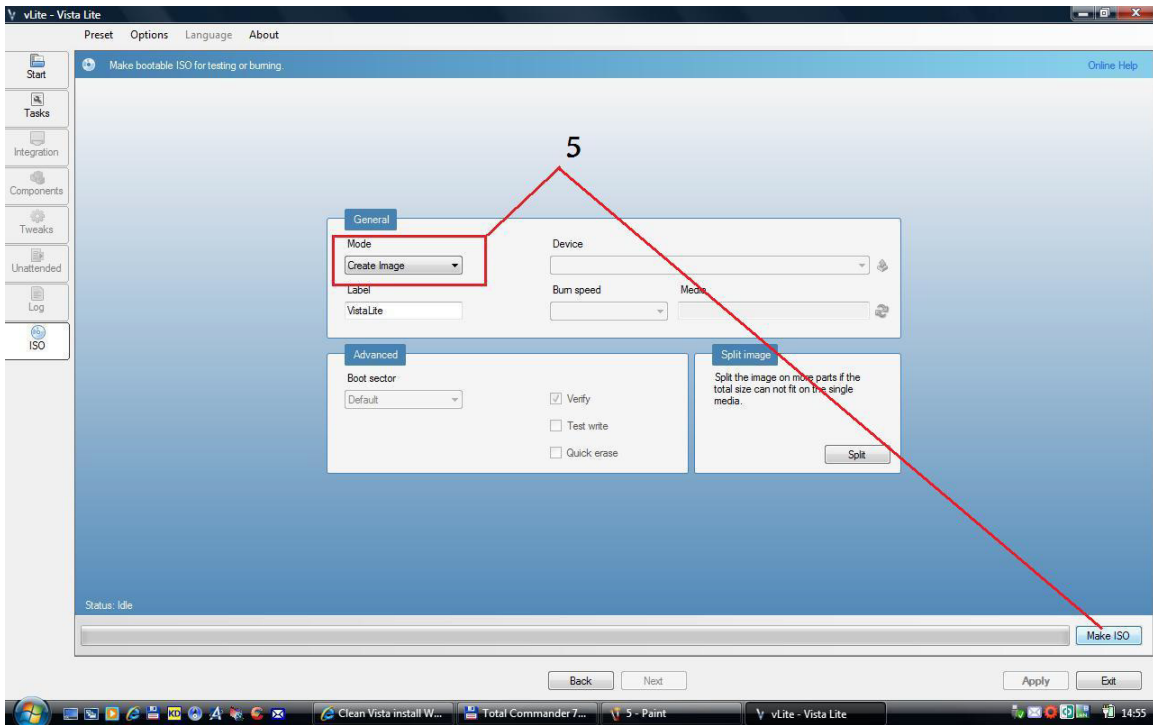

3. Click next.

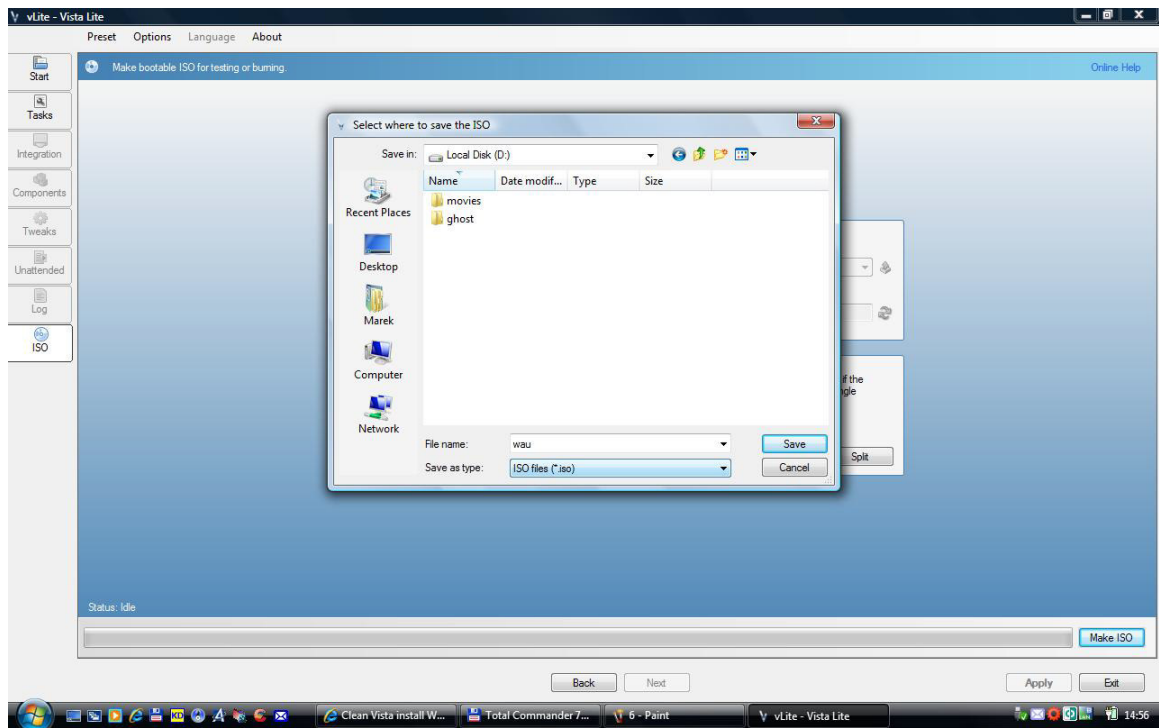

4. Check only “Bootable ISO” - the rest are not important (I think 😊).

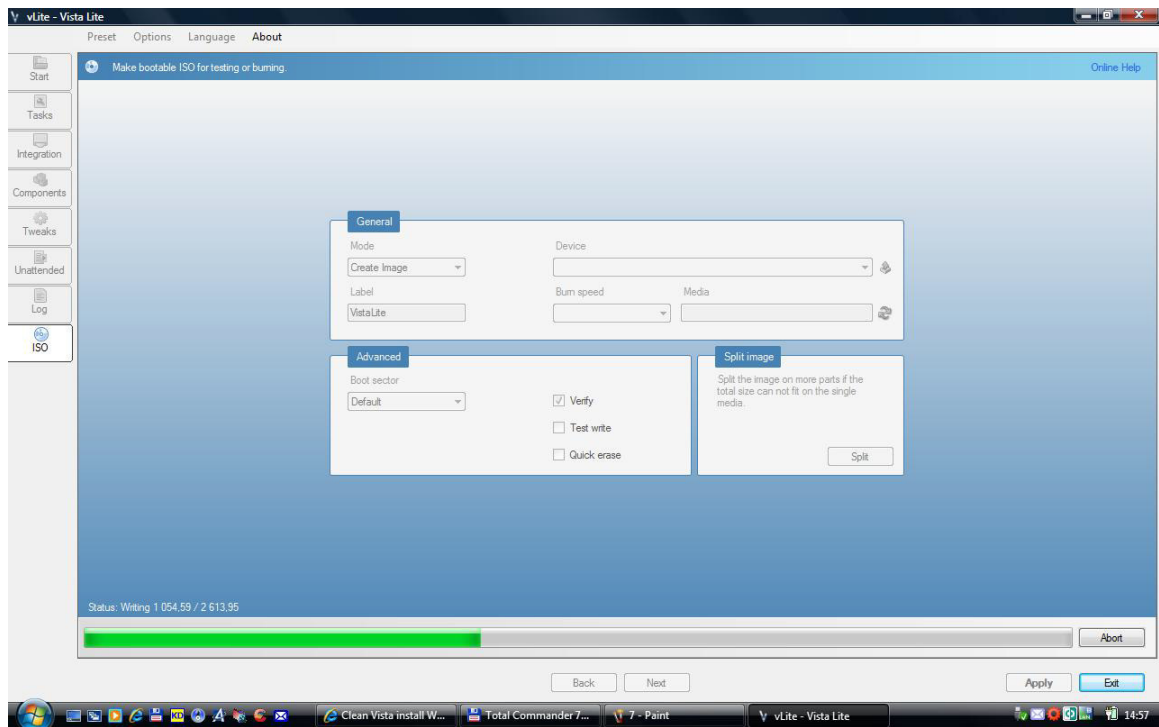

5. Select from the drop-down menu “Create Image” and next click “Make ISO”.

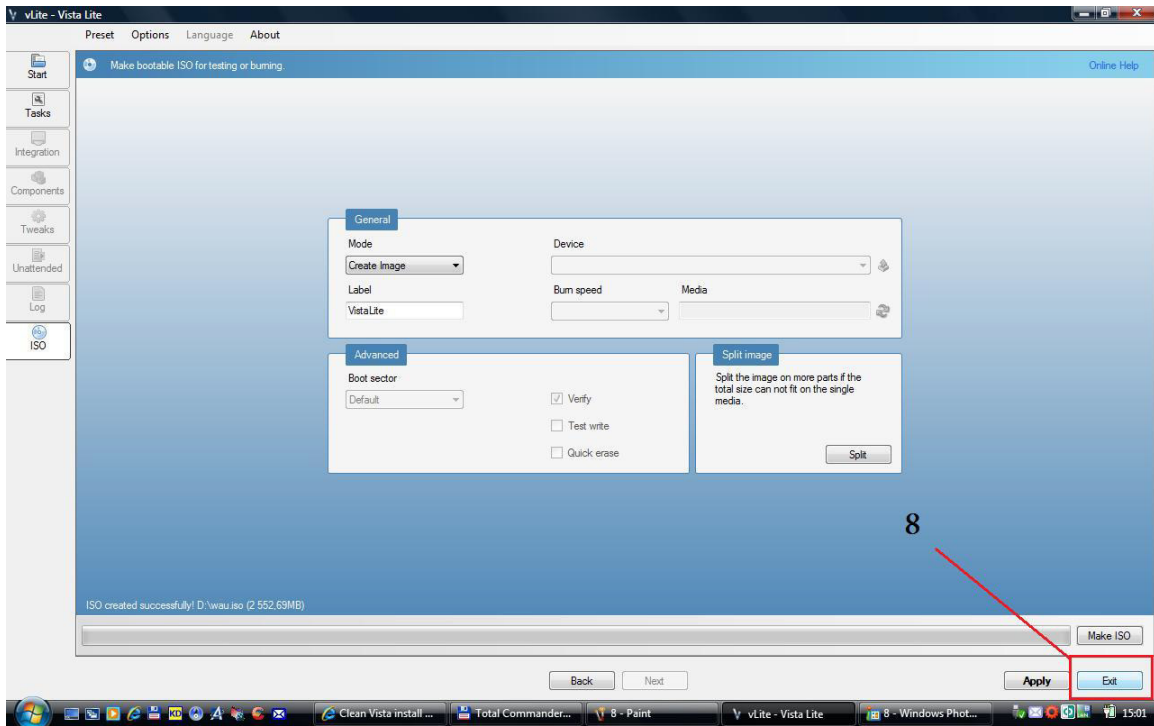

6. Select where to save the image.

7. vLite now start to create the ISO (it may take several minutes).

8. Finally END. Click “Exit”, don’t click “Apply”.

9. Now you can burn the Image (with Nero or Roxio). It will be a bootable DVD, after reboot your computer you will can install a clean Vista with your own Windows Anytime Upgrade DVD ☺.
